

Class Diagrams

Exercises

University

- In a university there are different classrooms, offices and departments. A department has a name and it contains many offices. A person working at the university has a unique ID and can be a professor or an employee.
 - A professor can be a full, associate or assistant professor and he/she is enrolled in one department.
 - Offices and classrooms have a number ID, and a classroom has a number of seats.
 - Every employee works in an office.
-

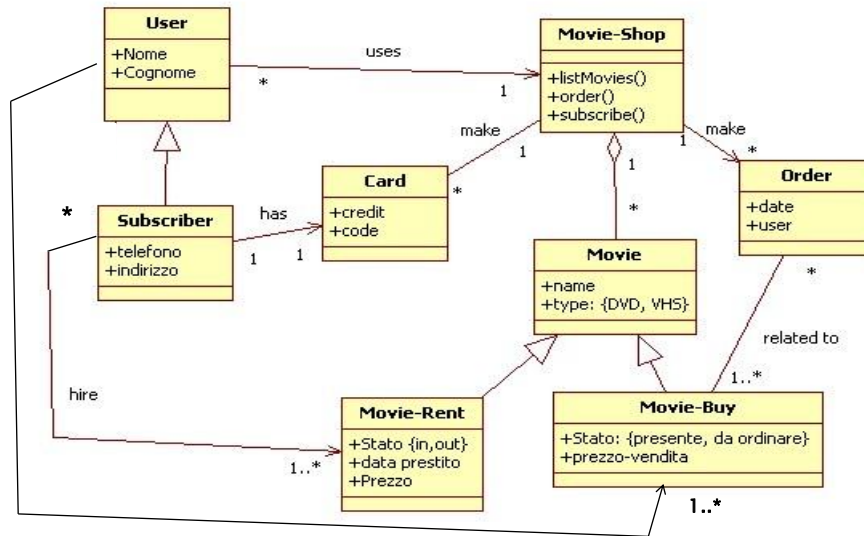

University: solution

Movie– Shop

- Design a system for a movie-shop, in order to handle ordering of movies and browsing of the catalogue of the store, and user subscriptions with rechargeable cards.
 - Only subscribers are allowed hiring movies with their own card.
 - Credit is updated on the card during rent operations.
 - Both users and subscribers can buy a movie and their data are saved in the related order.
 - When a movie is not available it is ordered .
-

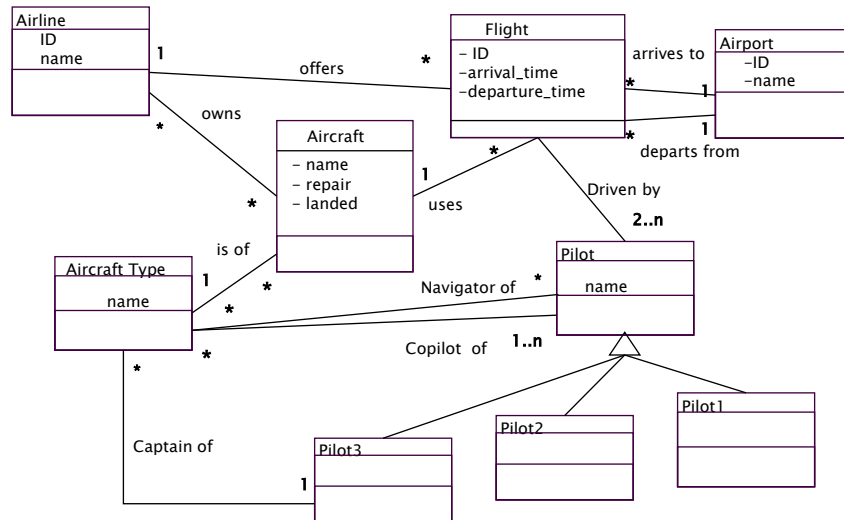

Movie-Shop: solution

Flights

We want to model a system for management of flights and pilots. An airline operates flights. Each airline has an ID. Each flight has an ID a departure airport and an arrival airport: an airport as a unique identifier. Each flight has a pilot and a co-pilot, and it uses an aircraft of a certain type; a flight has also a departure time and an arrival time. An airline owns a set of aircrafts of different types. An aircraft can be in a working state or it can be under repair. In a particular moment an aircraft can be landed or airborne. A company has a set of pilots: each pilot has an experience level: 1 is minimum, 3 is maximum. A type of aeroplane may need a particular number of pilots, with a different role (e.g.: captain, co-pilot, navigator): there must be at least one captain and one co-pilot, and a captain must have a level 3.

Flights – solution

Bank system

A bank system contains data on customers (identified by name and address) and their accounts.

Each account has a balance and there are 2 type of accounts: one for savings which offers an interest rate, the other for investments, used to buy stocks.

Stocks are bought at a certain quantity for a certain price (ticker) and the bank applies commission on stock orders.

Bank solution
